Methods and definitions

Since the introduction of Intrastat for intra-EU trade on 1 January 1993, the value of dispatches has been consistently higher than that of arrivals. In theory, as dispatches are declared FOB and arrivals CIF, the value of arrivals should be slightly higher than that of dispatches. Eurostat uses dispatches as the more reliable measure of total intra-EU trade as, at aggregated levels, total dispatches has better coverage than total arrivals. Due to this divergence in intra-EU trade, and to the difficulties of interpreting figures in absolute terms at the level of individual Member States, trade balances for individual Member States must be interpreted with caution. The same caution applies to the trade balance of the euro area, which includes some intra-EU trade.

National concepts may differ from the harmonised methodology used by Eurostat, leading to differences between figures in this release and those published nationally, both for raw data and for seasonally adjusted series.

Products are classified according to the Standard international trade classification (SITC), Revision 4.
